The invention relates to an immunogenic or vaccine composition inducing an immune response towards the HPV-16 Papillomavirus native 20 E7 protein, without simultaneously inducing an immunosuppression, said composition comprising, as the active ingredient, a non immunosuppressive mutated E7 protein, comprising the amino acid sequence consisting, from the N-terminal end to the C-terminal end, in:

- 25 i. the 1-19 amino acid sequence of sequence SEQ ID No. 3;
- ii. an amino acid sequence possessing (a) the substitution of at least one amino acid, compared to the 20-29 corresponding amino acid sequence of sequence SEQ ID No. 3 or (b) the deletion of at least four consecutive amino acids, compared to the 20-29 corresponding amino acid sequence of sequence SEQ ID No. 3; and
- 30 iii. the 30-98 amino acid sequence of sequence SEQ ID No.;
